

## Sample Argument Text

Electric cars are better than gasoline cars. They produce zero emissions at the point of use, which helps reduce air pollution in cities. Moreover, they are cheaper to operate because electricity costs less than gasoline.

However, critics argue that electric cars are expensive to purchase. The battery technology is still developing and replacement costs are high.

Continued from page 1...

In conclusion, while electric cars have higher upfront costs, their long-term benefits for the environment and operating costs make them a worthwhile investment for the future.
